

HIS EXCELLENCY SENATOR GOD'S WILL OBOT AKPABIO,
GCON, PRESIDENT OF THE SENATE,
FEDERAL REPUBLIC OF NIGERIA,
3 ARMS ZONE, NATIONAL ASSEMBLY COMPLEX ABUJA.

Through The Clerk of the National Assembly,
Mr. Kamorudeen (Kamoru) Ogunlana.

DATE: March 9th 2026

**SUBJECT: PROPOSAL FOR THE STRATEGIC UPGRADE OF VEHICULAR ACCESS CONTROL:
TRANSITIONING FROM MANUAL INSPECTION TO ENCRYPTED QR-CODE DIGITAL
VERIFICATION ARCHITECTURE**

1. THE OPENING STATEMENT

Sir,

In an era defined by rapid technological evolution and escalating security complexities, the imperative for premier national institutions to adopt data-driven and tactical security measures has never been more urgent. Standard Group Ventures Technology Limited respectfully submits this comprehensive proposal to overhaul the current vehicular entry and exit protocols of the National Assembly; moving away from the existing manual inspection framework toward a sophisticated, 21st-century digital QR-coded identification system.

Currently, the reliance on physical observation and manual verification for the thousands of vehicles traversing the National Assembly premises represents a significant tactical gap. While the security personnels must be commended for the current exhaustive security checks, this antiquated approach is however not only void of professional precision but also exposes the hallowed chambers to preventable risks, including unauthorized access and car theft which seems to be prevalent at the moment. Furthermore, the absence of a computerized tracking system is inconsistent with the prestigious status of the National Assembly as a pioneer of digital transformation in Nigeria.

Our proposed intervention seeks to preempt these vulnerabilities by deploying 5,000 units of high-security, computerized QR-coded plastic gate passes synchronized with 20 industrial-grade Android handheld scanning devices. This transition will eliminate human error, frequent car theft and streamline vehicular flow, and project a professional image of security personnel, thereby ensuring that the National Assembly does not lag behind in pioneering digital initiatives that safeguard both its personnel and its institutional prestige.

2. TECHNICAL JUSTIFICATION: THE NEED FOR ARCHITECTURAL CHANGE

2.1. The Vulnerabilities of Manual Inspection

The current practice of manual inspection is a legacy system that no longer fits the security demands of 2026.

- **Identification Lag:** Security personnel at the MOPOL and Villa gates spend excessive time per vehicle attempting to verify identities manually.
- **Cloning Risks:** Manual paper tags or stickers are easily forged by criminal elements, allowing unauthorized vehicles into the complex.
- **The "Invisible" Fleet:** Thousands of vehicles move in and out of the National Assembly daily without any digital footprint. In the event of a security breach or car theft, there is no retrievable data to track the exact movement of a suspect vehicle.

2.2. The Digital Alternative: QR-Code Synergy

By deploying encrypted QR-coded plastic cards, we create a "Digital Handshake" at every entry point. Each card is unique to a vehicle owner's profile. When scanned by our Android Handheld Devices, the system provides instant verification, ensuring that the person driving the car is the legitimate owner or authorized staff.

3. THE PROPOSED TECHNOLOGY STACK

3.1. Computerized QR-Coded Plastic Gate Pass Cards

- **Material:** High-durability PVC Plastic (ISO 7810 Standard).
- **Security Features:** UV-reactive printing, holographic NASS logo, and an encrypted QR code that redirects to a secure internal database.
- **Functionality:** Each card will contain the vehicle's registration number, make, model, and the owner's biometric data (photo and department).

3.2. Android Handheld Scanning Devices

- **Mobility:** These devices allow security personnel to walk between lanes during peak hours, clearing traffic faster than static checkpoints.
- **Connectivity:** Equipped with 5G and Wi-Fi capabilities to sync data in real-time with the Sergeant-at-Arms' central monitoring unit.
- **Battery Life:** 12-hour continuous operation to cover full shifts without interruption.

4. STRATEGIC BENEFITS TO THE NATIONAL ASSEMBLY

A. Prevention of Car Theft & Enhanced Security Architecture

The system acts as a preemptive shield. Since every exit requires a "Check-Out" scan that matches the "Check-In" data, it becomes nearly impossible for a vehicle to be stolen from the premises. Any discrepancy between the driver and the registered card holder triggers an immediate alarm on the handheld device.

B. Projecting Professionalism & Reducing Stress

Manual inspection is physically and mentally taxing for security personnel. Automating the verification process reduces friction between security staff and visitors, allowing personnel to focus on higher-level surveillance rather than tedious manual logging.

C. Institutional Prestige & Leadership

The National Assembly is a beacon of Nigerian governance. By adopting this technology, the NASS sets a standard for all other Government MDAs. It signals to the international community and visiting dignitaries that the Nigerian Legislature operates at a global 21st-century standard. Implementing this QR-coded system further signals that Nigeria's legislature is a tech-forward institution that prioritizes the safety of its members and guests.

6. PROJECT TIMELINE & PHASING SEMENTATION

- 1. Phase 1 (Week 1): Security Audit & Database Design.**
- 2. Phase 2 (Week 2-3): Production of 5,000 or more QR-coded cards.**
- 3. Phase 3 (Week 4): Delivery of Android devices and software integration.**
- 4. Phase 4 (Week 5): On-site training for Sergeant-at-Arms personnel.**
- 5. Phase 5 (Week 6): Official Launch & Transition from Manual to Digital.**

7. CONCLUSION

The National Assembly cannot afford to remain in an era of manual inspection while the rest of the world moves toward digital integration. This proposal offers a clear path toward a more secure, prestigious, and efficient legislative complex. Standard Group Ventures Technology Limited is committed to delivering this project with the highest level of professional excellence.

look forward to discussing the technical roadmap with you, which includes:

- Budget**
- Workflow**
- Timeline**
- Prototype Design Concept.**

Yours Faithfully,

Mayor Austin Attah
Chief Project Consultant and technologist
Standard Group Ventures Technology Limited.
